

Implant Crown/Bridge Delivery

- After the placement of implant abutment and the cement of the crown your gums may be a little tender for a couple days. This should start to feel more normal over time.
- For 24 hours after the cement, do not eat any sticky foods or floss the tooth. After that you may eat and floss like normal.
- If your bite feels off after your appointment, please give our office a call and we can adjust the crown.
- When you come back to our office for your cleanings please let the hygienist know you have a dental implant. We will use special instruments to clean the implant.

If you have any questions please contact us at (916)773-6565
